The present sequence represents a secoisolariciresinol dehydrogenase CC protein. The enzyme is involved in the lignan biosynthetic pathway. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kba, an isolectric point of 5.9-6.85, and require cc weight of 27-31 kba, an isolectric point of 5.9-6.85, and require cc weight of 27-31 kba, an isolectric point of 5.9-6.85, and require cc will be a cofactor. The secoisolariciresinol dehydrogenase in plants or to alter lignan of secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically cc active lignan, matairesinol. The secoisolariciresinol dehydrogenase cc alter the levels of health-protecting lignans, including phytosetrogens cross enterolactons and enterodiol, in plant species, including vegetables, grains and fruits and to food items incorporating material estimates and provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary csupplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NSTYIHCDVINEDGVKNAVDNIVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSV 120

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway.

The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require veight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require constant of 27-31 KDa, and isoelectric point of 5.9-6.85, and require constant of 27-31 KDa, and require constant of 28-31 KDA, and required constant of 28-31 KDA, and required constant of 28-31 KDA, and required constant of 28-31 KDA, and restant of 28-31 KDA, and an abundant, natural supply of 19-31 KDA, and dietary constant of 28-31 KDA, and an abundant, and an abundant, natural supply of 19-31 KDA, and dietary constant of 28-31 KDA, and an abundant, and an abundant, and an abundant supply of purposes, for example as neutriceuticals and dietary constant of 28-31 KDA, and an abundant supply of purposes, for example as neutriceuticals and dietary constant of 28-31 KDA, and an abundant supply of purposes, for example (-) tradendogenin which possesses antiviral constant of 28-31 KDA, and (-) tradendogenin which possesses antiviral constant constant of 28-31 KDA, and (-) tradendogenin which possesses antiviral constant constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSVN 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression of the enzymes. It is also used to obtain expression of the pharmacologically secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytoestrogens cuch as enterolactone and enterodiol, in plant species, including the enterolactone and enterodiol, in plant species, including derived from such genetically altered plants; genetically alter plant a variety of purposes, for example as neutricenticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, for example (-) trandelogenin which possesses antiviral properties, and (-)-todophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSVN 121

The secoisolariciteshing a secoisolariciteshing deplease protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciteshinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require NAD or NADP as a coffactor. The secoisolariciteshinol dehydrogenase mucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of the enzymes. It is also used to obtain expression or enhanced expression of the plarmacologically active lignan, mataireshinol. The secoisolariciteshinol dehydrogenase proteins and mucleic acids can be utilized to: elevate or otherwise proteins and mucleic acids can be utilized to: elevate or otherwise uch as enterolactone and enterodiol, in plant species, including phytocest uch as enterolactone and enterodiol, in plant species, including phytocest uch as enterolactone and enterodiol, in plant species, including carived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, for example (-)-trachelogenin which possesses antiviral properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          엄
                                                                                                                                                                                                                                                                                                                               The invention relates to a method for increasing the guaiacyl (G)-lignan content in seeds of a monocotyledon plant, comprising selecting at least formation, stably transforming a monocotyledon plant with cflignan (GG) constructs having a seed-specific transcriptional regulatory region operably linked to a nucleic acid sequence encoding the enzyme. The monocotyledonous plant (e.g. rice) with GG constructs resulting in increased expression of the genes encoded by GG constructs. The G-lignan enriched seed composition is useful as a food additive. This sequence represents the secoisolaricinesinol dehydrogenase protein relating to the invention.

The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan, matairesinol; health-protecting lignan, phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.

tis also used to obtain expression or enhanced expression of
secolsolariciresinol dehydrogenase in plants or to alter lignan
bloosynthesis. The enzyme is used for production of the pharmacologically
active lignan, mataireshol. The secolsolaricireshol dehydrogenase
proteins and muclaic acids can be utilized to: elevate or otherwise
proteins and muclaic acids can be utilized to: elevate or otherwise
alter the levels of health-protecting lignans, including phytoestrogens
such as enterolactone and enterodiol, in plant species, including
vegetables, grains and fruits and to food items incorporating material
cerived from such genetically altered plants; genetically alter plant
species to provide an abundant, natural supply of lignans useful for
a variety of purposes, for example as neutriceuticals and dietary
complements; to genetically alter living organisms to produce an
abundant supply of optically pure lignans having desirable biological
properties, for example (-)-trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NSTYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFNNAGISDPYKPRVIDNEKADFERVLSX 120

The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytocestrogens such as enterolactone and enterodiol, in plant species, including material
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSVN 121

                                                                                                                                                                                        The invention relates to identifying target proteins (ARB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the B-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SVNVTGVFLCMKHAARVMIP-ARSGNIISTASLSSTMGGGSSHAYCGSKHAVLALTRNLA 177

                                                                                                              The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value sequences by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAIGTSNSTYIHCD 68

This sequence represents the tasselseed 2 (Ts2) protein derived from maize. This sequence is encoded by the H2 clone. The Ts2 protein in maize is very similar to Ts2 protein found in rice, and both these sequences show considerable homology to bacterial hydroxysteroid dehydrogenases. Ts2 has a mol. wt. of 35 kD and a predicted pl of 6.7. The Ts2 coding sequence and its promoter, may be used to control sexual development of floral tissue and to provide exclusively male

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description

Sequence 14, Application US/09504358

Patent No. 6365376

GENERAL INFORMATION:
GENERAL INFORMATION:
FAPPLICANT: ROUVIERE, Pierre E.
APPLICANT: Brzostowicz, Patricia C.
TITLE OF INVENTION: GENES AND ENZYMES FOR THE PRODUCTION OF ADIPIC ACID INTERMEDIATES
FILE REFERENCE: BC1001 US NA
CURRENT APPLICATION NUMBER: US/09/504,358
CURRENT PILING DATE: 2000-02-15
EARLIER PILING DATE: 1999-February-19
NUMBER OF SEQ ID NOS: 49
SOFTWARE: Microsoft Office 97
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             186 FGGDQIRVNSLTPGLIQTDI---TGGLMNDDRRHDIL--AGIPLGRLGKAQDVANAALFL 240

Sequence 5742, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BADMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NOS: 8252
                                                                                                                                                                            APPLICANT: Marc J. Rubenfield et al.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 82,

Magata Y., Ohtomo R., Miyauchi K., Fukuda M., Yano K., Takagi M.;
"Cloning and sequencing of a 2,5-dichloro-2,5-cyclohexadiene-1,4-diol
dehydrogenase gene involved in the degradation of gamma-
hexachlorocyclohexane in Pseudomonas paucimobilis.";
J. Bacteriol, 176:317-3125(1994).
I. PubCTION: DEGRADATION OF 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL
(2,5-DDOL) INTO 2,5-DICHLOROCYCHONEXADIENE-1,4-DIOL
(3,5-DDOL) INTO 2,5-DICHLOROCYCHONEXADIENE-1,4-DIOL
STMILARITY: Gamma-hexachlorocyclohexane degradation; third step.
(SDR) family.

"Evidence for lateral gene transfer between Archaea and Bacteria from
genome sequence of Thermotoga maritima.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CATALYTIC ACTIVITY: (3R)-3-hydroxyacyl-[acyl-carrier protein] + NADP(+) = 3-oxoacyl-[acyl-carrier protein] + NADPH.
PATHWAY: Fatty acid biosynthesis pathway, first reduction step.
SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pfam: PF00106; adh short; 1.

-!- CATALYTIC ACTIVITY: (3R)-3-hydroxyacyl-[acyl-carrier protein] + NADPH.
-!- CATALYTIC ACTIVITY: (3R)-3-hydroxyacyl-[acyl-carrier protein] + NADPH.
-!- PATHWAY: Fatty acid biosynthesis pathway; first reduction step.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Kalman S., Mitchell W., Marathe R., Lammel C., Fan J., Hyman R.W., Olinger L., Grimwood J., Davis R.W., Stephens R.S.; "Comparative genomes of Chlamydia pneumoniae and C. trachomatis."; Nat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    J. Biol. Chem. 278:19367-19395 (2003).
-!- FUNCTION: Catalyzes the regio- and stereoselective reversible NAD-dependent reduction of (6R)-2,2,6-trimethyl-1,4-cyclohexanedione (1evodione) to (4R,6R)-4-hydroxy-2,2,6-trimethylcyclohexanone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     + NAD(+) = (6R)-2,2,6-trimethyl-1,4-cyclohexanedione + NADH.
-!-RNZYME REGULATION: Strongly activated by monovalent cations, such as K(+), Na(+), and NH4(+).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDE----LGHSVVEAIGTSNSTYI

-!- CATALYTIC ACTIVITY: (3R)-3-hydroxyacyl-[acyl-carrier protein] +
NADP(+) = 3-oxoacyl-[acyl-carrier protein] + NADPH.
-!- PATHWAY: Fatty acid biosynthesis pathway; first reduction step.
-!- SIMILARITY: Belongs to the short-chain dehydrogenases/reductases (SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacteria; Profeobacteria, Gammaproteobacteria; Enterobacteriales;
